

From scattered content to a publication-ready manuscript.

Paste, structure, edit, validate, and publish complex documents without rebuilding everything by hand.

ONE CONNECTED WORKFLOW

AI document conversion

Structured editing

Preview-to-edit

Preflight checks

Publisher templates

Editable equations

Multilingual publishing

Bring content in. Keep its structure.

Two fast ways to turn existing material into a working manuscript.

01

AI document to structured project

TURN AI-GENERATED CONTENT INTO A MANUSCRIPT YOU CAN EDIT

Create the AI conversion kit

Vohqen packages the source, schema, and exact conversion instructions.

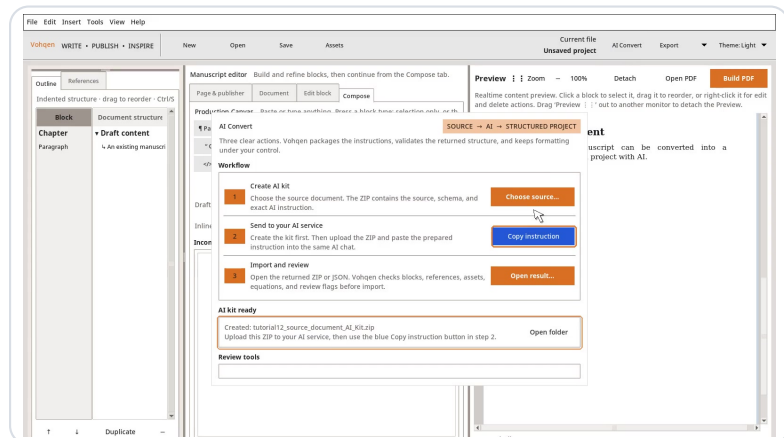

Import the returned result

Open the returned ZIP or JSON and review blocks, references, assets, and structure.

Continue in the normal editor

The converted project becomes a regular Vohqen manuscript workflow.

02

Write separately. Merge safely.

BRING SELECTED CHAPTERS OR BLOCKS INTO THE CURRENT PROJECT

Choose exactly what to import

Select chapters or individual blocks from another Vohqen project.

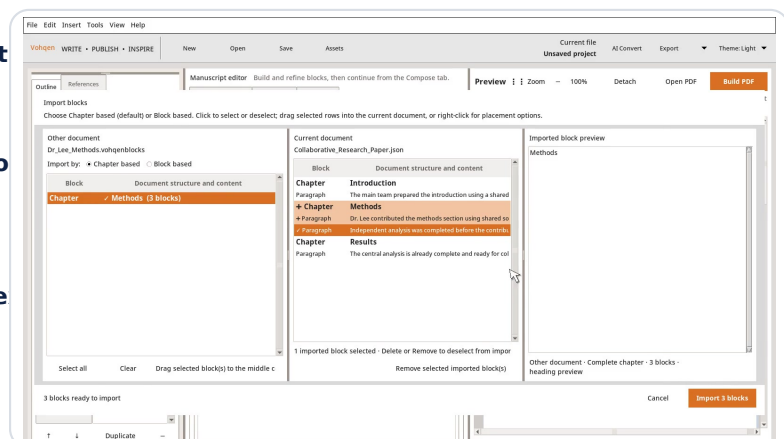

Keep the current manuscript o

Imported content is placed where you choose instead of disrupting the outline.

Reuse related work with conte

Bring structured content into the current manuscript while keeping the workflow clear.

Edit in context. Catch problems early.

The manuscript stays editable while the preview and preflight checks expose what needs attention.

03

Double-click the preview to edit

EDIT THE DOCUMENT WHERE YOU SEE THE RESULT

Preview the formatted result

See the manuscript as it will appear while you work.

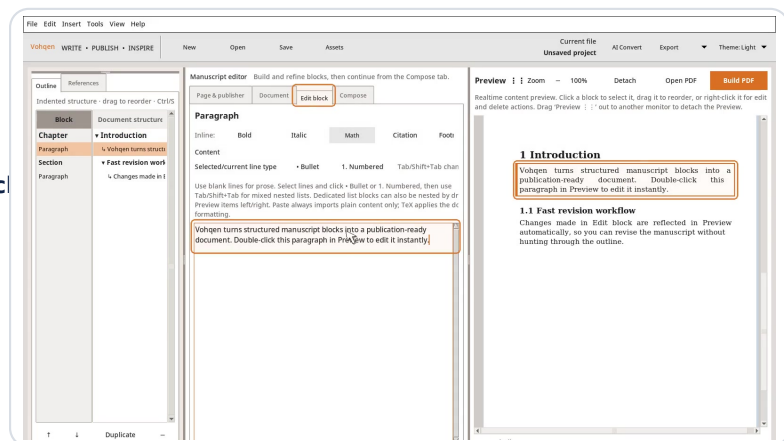

Jump straight to the right block

Double-click preview content to move directly to the matching editor block.

Keep structure visible

The outline, block editor, and preview remain connected during editing.

04

Catch problems before PDF build

RUN PREFLIGHT CHECKS BEFORE FINAL OUTPUT

Find missing assets

Surface missing figures, files, and related manuscript problems before build.

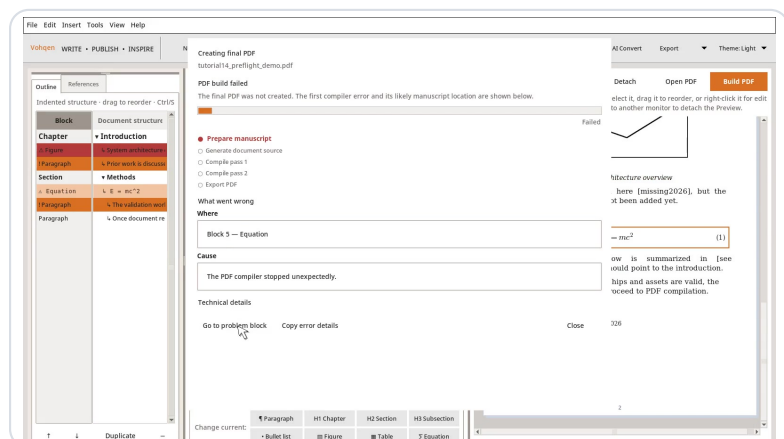

Find unresolved references

Expose missing or unresolved references and cross-reference problems.

Resolve issues before export

Review the problem summary before compiling the final PDF.

Publish with fewer formatting detours.

Use real publisher files, convert equations into editable math, and manage multilingual front matter.

05

Use the publisher's real LaTeX files

LET THE IMPORTED CLASS CONTROL THE DOCUMENT STYLE

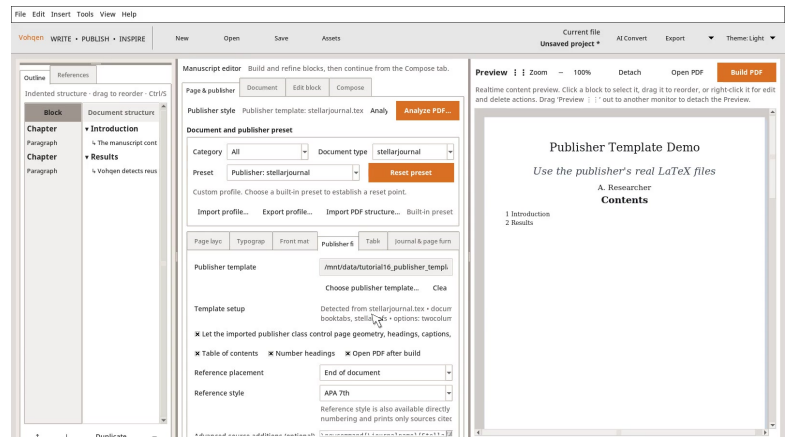

Apply a real publisher template

Load the publisher template and let its class control the document style.

Keep the manuscript workflow

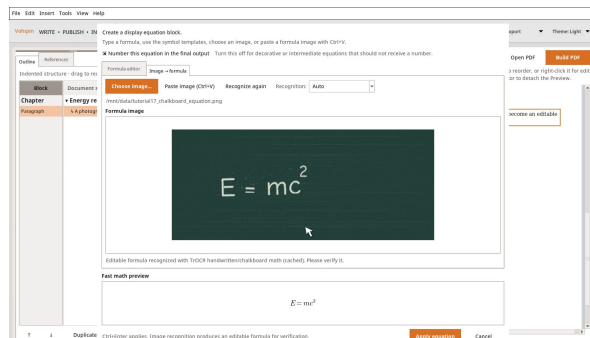

Use Vohqen editing and preview while the publisher files control output formatting.

06

Handwriting/image to editable equation

RECOGNIZE MATH, THEN EDIT THE FORMULA

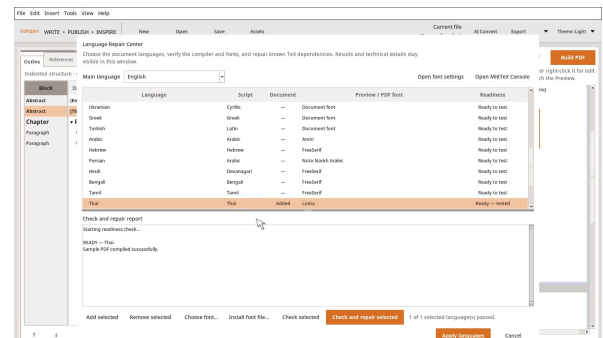

Recognize technical math

Convert handwriting or chalkboard equations into an editable formula for verification.

07

One manuscript, multiple languages

KEEP FRONT MATTER AND LANGUAGE OUTPUTS ORGANIZED

Manage multilingual front matter

Use the language manager to review language-specific front matter and output readiness.

Structure the manuscript. Keep control of the output.
